Energy Project Partner Brief

A practical starting point for a paid pilot covering one turbine, a defined PV block or a selected construction stage.

PUBLIC DOCUMENT	Version 1.0 8 October 2026	ENGLISH
Small entry scope	Agreed final deliverables	Scale decision after the pilot

Informational material. It is not a certificate, binding offer or project-specific method statement.

DOCUMENT SCOPE

Energy Project Partner Brief

A practical starting point for a paid pilot covering one turbine, a defined PV block or a selected construction stage.

01	One turbine Agreed surfaces, safe viewpoints and an observation register for further technical review.
02	Defined PV block Selected area, agreed capture conditions, RGB/thermal material and a structured observation list.
03	Construction stage Repeatable viewpoints, progress context and an organised handover for the project team.

Informational material. It is not a certificate, binding offer or project-specific method statement.

WHAT THE CLIENT CAN RECEIVE

What the client can receive

- Scope plan and capture list
- Photographs and source files
- Prioritised observation register
- Reference map or plan when agreed
- PDF report with limitations
- Proposed standard for subsequent assets

How we prepare the assignment

01	We define the decision the material must support and identify the final recipient.
02	We review the location, airspace, access, weather, privacy and operator requirements.
03	We confirm the capture list, references, file formats and reporting structure.
04	After capture, we organise the material and hand it over through an agreed secure channel.

IMPORTANT SCOPE LIMITS

Important scope limits

- The pilot is paid; pricing depends on the asset, logistics and required outputs.
- Results identify observations and locations for review but do not determine the technical cause.
- Scaling to a wider portfolio follows a joint review of the pilot.

Details needed for an initial review

- Which pilot is closest to the requirement?
- What decision must the material support?
- Who approves access and the operation?
- Which file formats and naming rules apply?
- What timing and delivery method are preferred?

Next step

Share the location, asset and project objective. Scope, timing and price are confirmed after a feasibility review.

SCAN TO OPEN WHATSAPP

Scan the code and send the prepared message. Add the location, asset type, required output and preferred timing.

- 1 Location and country
- 2 Asset or service
- 3 Purpose of the material
- 4 Preferred timing
