Visual site baseline pilot

A repeatable point of reference for an asset, construction site or infrastructure, prepared so that future visits can be compared.

PUBLIC DOCUMENT	Version 1.0 8 October 2026	ENGLISH
One agreed asset	Repeatable viewpoints	A standard for future visits

Informational material. It is not a certificate, binding offer or project-specific method statement.

DOCUMENT SCOPE

Visual site baseline pilot

A repeatable point of reference for an asset, construction site or infrastructure, prepared so that future visits can be compared.

01	Initial condition Overview and detail views recording visible condition on the agreed date.
02	Repeatability plan Viewpoints, heights, directions, naming and the frequency of subsequent capture.
03	Change register Clear period-to-period comparison and a list of visible differences for the client team to review.

Informational material. It is not a certificate, binding offer or project-specific method statement.

WHAT THE CLIENT CAN RECEIVE

What the client can receive

- Baseline capture plan
- Images referenced by zone
- Map or diagram of viewpoints
- Initial observation register
- PDF report with limitations
- Proposed schedule for subsequent visits

How we prepare the assignment

01	We define the decision the material must support and identify the final recipient.
02	We review the location, airspace, access, weather, privacy and operator requirements.
03	We confirm the capture list, references, file formats and reporting structure.
04	After capture, we organise the material and hand it over through an agreed secure channel.

IMPORTANT SCOPE LIMITS

Important scope limits

- The baseline records only what was visible under the capture conditions.
- Visual comparison is not a land survey or technical diagnosis.
- Changes in conditions, access or viewpoints may reduce comparability.

Details needed for an initial review

- Asset and area to include
- Decisions the comparison must support
- Frequency and intended monitoring period
- Stable access points and restrictions
- Required archive and report format

Next step

Share the location, asset and project objective. Scope, timing and price are confirmed after a feasibility review.

SCAN TO OPEN WHATSAPP

Scan the code and send the prepared message. Add the location, asset type, required output and preferred timing.

- 1 Location and country
- 2 Asset or service
- 3 Purpose of the material
- 4 Preferred timing
